Windows - Hinge Options

Side Hung Casement Hinges

You have 2 different hinges available for the side hung opener.

Standard Hinge: These are the standard hinge and therefore already included in the cost.

Projection Hinge: The projection hinge has acquired this name as they have the facility to project further than the standard hinge. (POA)

Standard

Projection

Top Hung Casement Hinge

On a Top Hung casement, next to a door opening, we will always advise using the B528M hinge if you still require your doors to fold to 180 degrees. They sit slightly flusher to the framework and provide a discrete look as they will be PPC the same colour as the frame.

Fanlight Catch

Used on Bottom Hung windows and Pivot windows.

Options and Technical Specification - Furniture Finishes

Your quotation will include our standard furniture finish. Once you have selected your furniture you will have to select the finish you like. There are seven finishes you can pick from, listed below.

Satin Brass Unlacquered (SBU)

A satin polished solid brass surface treated with a thin beeswax coating for protection during transit and installation. An unlacquered living finish, intended to oxidize and patina naturally over time.

An occasional light application of a good quality wax will assist in keeping the finish in good condition.

Satin Chrome (SC)

A satin chromium plate on top of a nickel plate, sateen polished, solid brass surface. Chromium plating is a very hard wearing, stable finish, suitable for most environments.

An occasional light application of a good quality wax will assist in keeping the finish in good condition. Metal polish can be used if desired.

Polished Chrome (PC)

A bright chromium plate on top of a nickel plate, highly polished mirror finish, solid brass surface. Chromium plating is a very hard wearing, stable finish, suitable for most environments.

An occasional light application of a good quality wax will assist in keeping the finish in good condition. Metal polish can be used if desired.

Antique Brass (ABU)
(unlacquered)

A sateen polished solid brass surface given a hand applied medium antique patina, producing a soft, slightly reflective, sheen. Treated with a thin beeswax coating for protection during transit and installation. An unlacquered living finish, intended to oxidize and patina naturally over time.

An occasional light application of a good quality wax will assist in keeping the finish in good condition.

Dark Matt Bronze (DMB)

Dark bronze patina over copper plated, sateen polished solid brass which is then coated with a decorative matt lacquer to give a dark matt appearance.

An occasional light application of a good quality wax will assist in keeping the finish in good condition.

Matt Black Chrome (MBC)

A deep matt black chromium plating on top of a specially prepared surface producing a flat non-reflective finish.

Chromium plating is a very hard wearing, stable finish, suitable for most environments.

An occasional light application of a good quality wax will assist in keeping the finish in good condition. Metal polish can be used if desired.

Satin Nickel Bronzed (SNB)

A satin nickel-plated surface given a light bronze patina to produce an aged nickel silver appearance. This is a living finish, intended to oxidize and patina naturally over time.

An occasional light application of a good quality wax will assist in keeping the finish in good condition.
